

# xdag-mainnet.conf and xdag.sh Modification Guide

---

**Note:** The following steps need to be performed after pulling the latest node code.

## 1. xdag-mainnet.conf

---

### Step 1. Modify the node RPC configuration

Change `rpc.enabled = true` to `rpc.http.enabled = true`

### Step 2. Update the whitelist of nodes

During the upgrade, the community will update the nodes in the whitelist. Please refer to the node whitelist released by the community.

### Step 3. Modify the generate block settings (Exchanges only)

Change `node.generate.block.enable = true` to `node.generate.block.enable = false`

## 2. xdag.sh

---

### Step 1. Modify the version in the xdag.sh file

```
cd xdagj/script
sudo vim xdag.sh
```

Change `XDAG_VERSION="${project.version}"` to `XDAG_VERSION="0.8.0"`

### Step 2. Copy the new version of xdag.sh file to the /run directory

```
cp xdag.sh /run
```
